

VOLCANITE

Natural Mineral Fertilizer and Soil Conditioner

Paramount Growth Holdings Inc. is proud to introduce a remarkable new natural growth stimulant and soil fertilizer sourced from a rare volcanic site located in the interior of British Columbia. Paramount’s unique soil supplement, **“Volcanite,”** is highly mineralized and possesses an abundance of **Paramagnetic**, electro-magnetic energy in the ELF (extremely low frequency) range, which significantly contributes to plant growth & health.

Key Features and Benefits

FEATURES	BENEFITS
Volcanic Origin	Totally natural organic substance
Rich Natural Source of 32 Essential Minerals & Trace Elements	Re-mineralizes tired or worn out soils; provides nutritional reinforcement for all plant life: vegetables, fruits, grains, flowers, etc. Supports plant enzymes & hormones for healthy growth.
Rock Based Natural Formulation	Provides slow release of minerals and trace elements - unlike chemical additives that dissolve quickly, “Volcanite” remains active in the soil for 3 years or more, builds humus complex and energizes water
Nitrogen , Phosphorus & Potassium	The NPK 522 elements are sustained in the soil at root level much longer, not being leached away by rain and irrigation - as a result “Volcanite” has a much higher long term nutrient content value.
Increases water retention in the soil	Increases soil’s ability to retain up to 50% more moisture in and around the root structure, allowing plants to survive during dry periods
Plants Become Cold Tolerant and Frost Resistant	Greater crop yield and longer growing season due to earlier spring planting and later fall harvesting
Pest Resistant	No chemical pesticides required – pests are not attracted to healthy plants, and are repelled by the paramagnetic effect
Slug Resistant	Copper content and natural shape of the volcanic material deters slugs
Acid/Alkaline Balance	<i>Acidic</i> Ferrous Oxide (Iron) and <i>Alkaline</i> Limestone (Calcium) are naturally buffered allowing a PH balance up to 7.3
Paramagnetic Effect	Stimulates healthy plant growth, i.e. increases bio-mass in the root structure, strengthens plant fiber, accelerates germination of seeds, enhances appearance, taste, aroma and overall nutritional value
Algae & Fungus Control	Volcanite is shown to overcome the effects of these plant pathogens

VOLCANITE

The effect of this Paramagnetic directional alignment is to facilitate a plant's access to nutrients and the transport of minerals through its root system. This leads to faster growth (even at the germination stage), deeper more efficient roots, and a higher plant yield. Paramagnetism is a basic property of volcanic matter at the molecular level and is scientifically quantifiable.

Major Minerals and Trace Elements

Nitrogen 5.0%	Phosphorous 2.0%	Potassium 2.0%	Silica 25.7%	Potash 2.0%
Iron 20.0%	Calcium 7.0%	Magnesium 1.5%	Boron 0.7%	Copper 0.23%
Sodium 0.10%	Cobalt 0.03%	Manganese 0.30%	Sulphur 1.0%	Zinc 0.10%

The Water Method

Volcanic rock transfers energy to water via magnetism. This radionic transfer is accomplished by active stirring or shaking of "Volcanite" rock fractures for at least 15 seconds, in say, a full watering can before applying. This same principle has also been applied successfully to hydroponic systems.

Soil Application Rates

- **General mix ratio:** 1/10 (1 part Volcanite to 10 parts soil)
- **Household Plants:** (4 to 6 inch pots) – 2 tablespoons/pot
- **Garden Vegetables:** 10% to soil volume
- **Garden Vegetables:** 20 lbs per 1000 sq.ft.
- **Garden Vegetables:** 800 lbs per acre
- **Fruit trees & shrubs:** 1 lb/plant or 1 lb/1 inch of trunk diameter

Above rates are approximate and should be estimated according to soil conditions.
